SET NO.: C 1 1

SHEET NO.: 3 59

G E N E R A L N O T E S
R O A D W A Y

SPECIFICATIONS

1. All works shall comply with the "DPWH Standard Specifications Volume II, Highways, Bridges and Airports 2013", special provisions and supplemental specifications pertaining to this project.

DIMENSIONS

1. Distances between the horizontal control points including reference points are measured and expressed in meters.
2. Unless otherwise specified, dimensions of pipes, box culverts, bridges and other structures are measured and expressed in millimeters.
3. All other dimensions are expressed in meters.

SURVEY SPECIFICATIONS

1. All project control points are projected in PRS '92 Grid Coordinate System (Zone 5).
2. Survey instrument used, Stonex S900 (Base) SN: S900281940030, Stonex S900 (Rover) SN: S900281940027.
3. Date Surveyed: November 12-14, 2024.
4. Project control points, refer to plan and profile.

ELEVATIONS AND GRADES

1. Finished grade elevation shown on plan and profile sheets refers to finished pavement level as indicated in the typical roadway section.
2. Ground grade shown on the plan and profile sheets refer to the elevation of the original ground along the centerline of the project road.

GRADING AND OTHER GENERAL REQUIREMENTS

1. Alignment and grades are subject to adjustments to suit actual field conditions.
2. Distances and elevations are in meter unless otherwise indicated.
3. Grades shown are top of finished pavement.
4. All works shall comply with the Standard Specifications for Highways and Bridges, Revised 2013 and "A Policy on Geometric Design", AASHTO 2011.
5. Where no detours are available, traffic shall be handled in accordance to the provisions of Clause 75 of the DPWH Standard Specifications, Volume 1, Requirements and Conditions of Contract (2013).
6. The contractor shall continuously keep the road undergoing improvement and the section detours in such condition satisfactory to the Engineer that traffic will be accommodated during the entire contract period without any inconvenience to the traveling public in accordance to Clause 38 of the DPWH Standards Specifications, Volume 1, Requirements and Conditions of Contract (2013). The contractor shall bear all expenses for constructing, reconstructing if necessary and maintaining such road detours, approaches, including run-around temporary bridges without compensation.
7. The apparent silence of specifications, plans, special provisions and supplementary specifications, as to any detail or the apparent omission from them of a detailed description concerning any point shall be regarded as meaning that only the best general practice is to prevail and that only material and workmanship of first class quality are to be used.
8. Roads closed to traffic shall be protected by effective barricades, and obstructions shall be illuminated at night. Suitable warning signs, illuminated at night by lanterns of flares, shall be provided. All lights for this purpose shall be kept burning from sunset to sunrise.
9. The contractor will be required to erect warning signs outside of, and 150m from, each end of the project, and 150m in advance at any place on the project where operations interfere with the use of the road by traffic, and at all intermediate points where the new work crosses or coincides with an existing road.
10. Before the start of actual construction, the As-Staked Plan should be submitted to the Davao del Norte Sub-District Engineering Office in order that immediate steps may be taken to correct or adjust whatever appreciable deviation there may be from the original plan.
11. Quarry site for Item 200 is Mabuhay, Carmen (25.25 km.) and Item 104 is Magwawa, Sto. Tomas (36.00 km.) from the project site. Disposal site is one (1) km outside project limit.
12. Design was based on survey data submitted by the Surveys and Investigation Unit of the Planning and Design Section of the DPWH-Davao del Norte Sub-District Engineering Office.

EARTHWORK

1. All concrete pavement, base course, sidewalks, curbs, gutters, etc., designated for removal shall be broken into pieces, the size of which shall not exceed 300mm (12in) in any dimension and stockpiled at designated locations on the project or as directed by the Engineer.
2. All excavations shall be finished to reasonably smooth and uniform surfaces. No materials shall be wasted without authority of the Engineer. Excavation operations shall be conducted so that material outside of the limit of slopes will not be disturbed.
3. Spoils from demolished/ excavated materials shall not be allowed to be stockpiled at the shoulder or part of the traveled roadway and shall be removed immediately to prevent obstruction. Spoils removed shall be disposed off in designated areas approved by the Engineer.
4. All embankments shall be constructed in accordance with the requirements of Item 104 - Embankment. It shall be compacted in horizontal layers not exceeding 200mm (loose measurement). After five successive layers, the fill/ embankment shall be saturated with water then dried before placing the succeeding layers. The procedure shall be repeated until the desired elevation is attained.
5. Watering and compacting of all embankments shall be considered as subsidiary work pertaining to other contract items. The cost of performance thereof shall be considered to be included in the contract unit bid price for other items.
6. Cut slopes, except in rocks and fill slopes shall be adjusted and warped to flow into each other or into natural ground surface without noticeable break.
7. Approaches and road connections shall be constructed as shown on the plans or as directed by the Engineer in such manners as to ensure proper connections to the riding surfaces.
8. Prior to commencing preparation of the subgrade, all culverts, cross drains, ducts and the like (including their fully completed backfill), ditches, drains and drainage outlets shall be completed. Any work on the preparation of the subgrade shall not be started unless prior work herein described shall have been approved by the Engineer.

SUBBASE AND BASE COURSE

1. Re-preparation and compaction of the existing base/ subbase to the required density shall be done prior to gravel resurfacing in accordance with DPWH Standard Specifications, Volume II, 2004, using vibrating rollers and pneumatic tire rollers. Inareas where the said equipment cannot be used, a portable mechanical compactor shall be used.

SURFACE COURSE

1. Use steel forms for item 311- Portland Cement Concrete Pavement.
2. When concrete is to be placed adjoining a previously constructed lane and mechanical equipment will be operated upon the existing lane, that previously constructed lane shall have attained the strength of fourteen (14) day concrete. If only finishing equipment is carried on the existing lane, paving in adjoining lanes may be permitted after three (3) days.
3. At transverse construction joints, holes of 60mm dia. and spaced at 300mm (for 230mm and 280mm thick concrete pavement) shall be drilled at one-half (1/2) of the existing concrete pavement thickness so as to permit the load transfer device (28mm dia. plain dowel bars for 230mm thick PCCP; 36mm dia plain dowel bars for 280mm thick PCCP; 36mm dia. for 300mm thick PCCP) to be inserted at one-half (1/2) of its length. The said device shall be installed firmly at the holes and shall be held in position parallel to the surface of the slab. The dowel bars shall be painted with red lead and the surface of one-half (1/2) of the length to be inserted shall be coated with concrete epoxy while the other half shall be coated with \ approved bituminous materials.
   -DO 54, s.2012
4. Transverse contraction joint shall be cut using a concrete saw to the required
   depth (one-fourth to one-third of the concrete pavement thickness) and width as shown in the approved plans.
5. All joints shall be sufficiently sealed with asphalt sealant prior to opening to vehicular traffic.
6. The Contractor shall prepare the design mix based on the absolute volume method as outlined in the American Concrete Institute (ACI) Standard 211.1, "Recommended Practice for Selecting Proportions for Normal and Heavyweight Concrete". The Engineer shall determine from laboratory tests of the materials to be used, the cement content and the proportions of aggregate and water that will produce workable concrete having a slump of between 40 and 75 mm if not vibrated or between 10 and 40 mm if vibrated, and a flexural strength of not less than 3.8 MPa when tested by the third-point method or 4.5 MPa when tested by the mid-point method at fourteen (14) days in accordance with AASHTO T 97 and T 177, respectively; or a compressive strength of 24.1 MPa for cores taken at fourteen (14) days and tested in accordance with AASHTO T 24.

DRAINAGE AND SLOPE PROTECTION STRUCTURES

1. Exact locations, gradients, lengths, top and invert elevations of all drainage structures that are required shall be determined in the field by the Engineer.
2. Extensions and other improvements of existing drainage structures are subject to change and shall be determined in the field by the Engineer in-charge.
3. During construction, any existing pipes found damaged or defectives shall be removed and replaced as directed by the Engineer. The removal of existing structures shall be paid for under Item 101(4)- Removal of Existing Pipe Culvert.
4. Any miscellaneous removal not shown on the plans including removal of headwalls and wingwalls of existing drainage structures that are to be extended or improved and disposal of resulting materials shall be considered subsidiary work pertaining to other contract items. The cost of performance thereof shall be considered to be included in the unit price for those items.

FOR ASPHALT OVERLAY

1. Item 310 shall consist of constructing a bituminous concrete surface course composed of aggregates, mineral filler, and bituminous material mixed in a central plant, constructed and laid hot on the prepared base in accordance with this specification and in conformity with lanes, grades, thickness and typical cross-section shown on the plans.
2. Bituminous material shall be either medium curing (MC) cut-back asphalt cement, whichever is called for in the bill of quantities. It shall conform to the requirements of ITEM 702, Bituminous Materials. The penetration grade, type and grade of bituminous material shall be specified in the special provisions.
3. Aggregates shall conform to the requirements of ITEM 307, Bituminous Plant Mix Surface.
4. The proportion of bituminous material on the basis of total dry aggregate shall be from 5.0 to 0.8 mass percent. The exact percentage to be used shall be fixed by the engineer in accordance with the job-mix formula and the other quality control requirements.
5. During the mixing operation, one half to one (0.50 to 1.0) mass percent of hydrated lime, dry aggregate basis shall be added to the mixture. The lower percentage limit is applicable to aggregate which are predominantly calcareous.
6. The construction requirements shall be in accordance whenever applicable with SECTION 307.3.
7. All deteriorated transverse and longitudinal joints shall be sealed with asphalt prior to laying of asphalt mix.
8. All cracks shall be sealed using machine pressurized epoxy injection. Spacing of copper tubes used in epoxy injection shall have a minimum and maximum spacing of 100 mm and 150 mm respectively depending on the extent of the cracks.
9. The contractor shall be responsible for handling materials and performing all parts of the work shall be approved by the engineer as to design, capacity and mechanical condition. The equipment shall be at the jobsite sufficiently ahead of the start of construction operations to be examined thoroughly and approved.
10. The Asphalt Overlay must attain an IRI of 3.0 m/km.
11. The Asphalt Plant must be BRS accredited.

REMOVAL OF EXISTING STRUCTURES AND OBSTRUCTIONS

1. No payment shall be made for removal of other miscellaneous structures that may be required as subsidiary work pertaining to other contract items except for specific items expressly identified for payment.
2. Improvements and other similar structures that will be affected during the implementation of this project shall be paid for under the road right-of-way improvement.

MISCELLANEOUS STRUCTURES

1. Obstructions within the roadway, if not illuminated shall be marked with reflectorized hazard markers (refer to Section 7 of the Highway Safety Design Standards Part 2 May 2012 Edition). For additional emphasis, it is advisable to mark obstructions with no less than five alternating reflectorized black and white stripes.
2. The application of paint for pavement markings shall be preferably carried out by a machine specially made for this purpose but where brushes are used, only round or oval brushes not exceeding 100mm in width shall be permitted. The paint shall be so applied as to produce a uniform, even coating in close contact with the surface being painted.
3. The applied thermoplastic pavement markings shall have a minimum of 2 years of longevity/durability.
4. Materials which are defective or have been applied in an unsatisfactory manner or to incorrect dimensions or in a wrong location shall be removed. The road pavement shall be made good and materials replaced, reconstructed and/or properly located, all at the contractor's expense and to the satisfaction of the Engineer.

CONSTRUCTION REQUIREMENTS

Staking activities shall be included in the construction schedule to be submitted by the contractor. dates and sequence of each staking activity shall be included.

The engineer shall set initial reference lines, horizontal and vertical control points, and shall furnish the data for use in establishing control for the completion of each element of the work. data relating to horizontal and vertical alignments, theoretical slope stake catch points, and other design data shall be furnished.

The contractor shall be responsible for the true settling of the works or improvements and for correctness of positions, levels, dimensions and alignment of all parts of the works. he shall provide all necessary instruments, appliances, materials and supplies, and labor in connection therewith. the contractor shall provide a survey crew supervisor at the project site whenever surveying/staking activity is in progress.

Prior to construction, the engineer shall be notified of any missing initial reference lines, controls, points, or stakes. the engineer shall reestablish missing initial reference lines, controls, points, or stakes.
The contractor for convenient use of government-furnished data shall perform additional calculations. immediate notification of apparent errors in the initial staking or in the furnished data shall be provided.

All initial reference and control points shall be preserved. at the start of construction, all destroyed or disturbed initial reference or control points necessary to the work shall be replaced.

Before surveying and staking, the contractor shall discuss and coordinate the following with the Engineer.

1. SURVEYING AND STAKING METHODS
2. STAKE MARKING/CONCRETE MONUMENTS
3. GRADE CONTROL FOR COURSES OF MATERIAL
4. REFERENCING
5. STRUCTURE CONTROL
6. ANY OTHER PROCEDURES AND CONTROLS NECESSARY FOR THE WORK

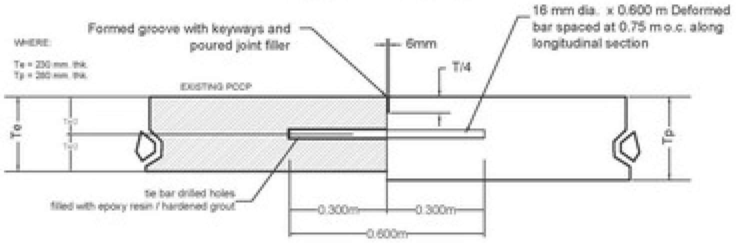
CONTRACTION JOINT SECTION

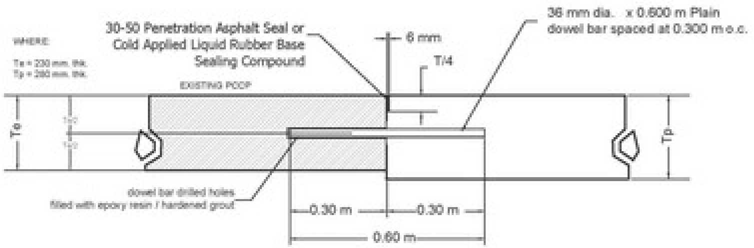
SCALE 1 : 20 M.



SECTION B - B

LONGITUDINAL CONSTRUCTION JOINT (NEW PCCP AND EXISTING PCCP)

SCALE 1 : 20 M.



SECTION C - C

DOWELLED EXPANSION JOINT DETAIL (NEW PCCP AND EXISTING PCCP)

SCALE 1 : 20 M.

1. Materials and workmanship shall conform with the DPWH Standard Specification for Highways, Bridges and Airport, 2013
2. Contraction joints are formed when concrete on one side of the joint is poured ahead and allowed to set before pouring on the other side, No construction joint shall be placed within 1.50 m. from the weakened plane joint.
3. At construction joint (longitudinal or transverse) care should be taken that no concrete from the last slab placed overhangs any portion of the first slab.
4. Tie bars should be deformed steel bars. All dowel bars shall be smooth round steel bar free from rust and other defects which might restrict their movement.
5. Type of weakened plane joint to be used shall be as specified in the plans and only one type should be used for the whole project.
6. Material for the metal side form shall be brand new sheet metal Gauge no. 15 of black iron free from rust and links.
7. At least six (6) successive dowelled butt joints at normal joint spacing shall be provided before or after an expansion joint.
8. The groove or cracks above joints (longitudinal or transverse) shall be sealed with 30-50 penetration asphalt seal or cold applied liquid rubber compound after the concrete had been cured and before opening pavement to traffic. Asphalt sealed should be poured in such manner that spalling shall be prevented/ eliminated, thus, provide a smooth leveling/ riding surface.
9. All transverse joints except construction joint shall be continuous from edge to edge.
10. All longitudinal joints shall meet at intersections with no gaps or offset.
11. All dimensions are in millimeters unless otherwise specified.
12. Avoid stoppage of formworks along curves.
13. Construct expansion joint at every 90 meters and/or every adjacent existing structures.

REFLECTORIZED THERMOPLASTIC PAVEMENT MARKINGS DETAIL

GENERAL NOTES:

1. The materials, dimensions, shape, color, size of numerals, letters and installation shall conform in accordance with specifications of DPWH manual on pavement markings.
2. Reflectorized thermoplastic pavement stripping material shall conform to AASHTO M249 in which the road must be applied in a molten state by mechanical means w/ surface application of glass beads at a rate of not less than 350 g/L of glass beads having a size range of drop-in type and will produce an adherent reflectorized stripe of specified thickness and width capable of resisting deformation by traffic.

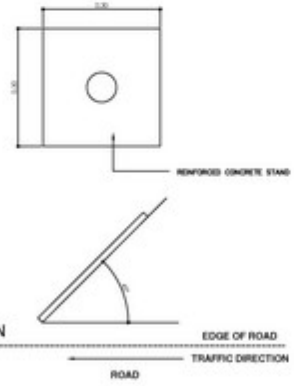
2440 mm. (8 ft.)
2440 mm. (8 ft.)
WHITE BACKGROUND



NOTE :

1. THE NEW BILLBOARD DESIGN LAYOUT, DIMENSION AND LETTER SIZES ON WHITE BACKGROUND, AS SHOWN ON THE ATTACHED DRAWING, SHALL BE DEPICTED ON A STANDARD BILLBOARD MEASURING 1200mm. x 600mm. (2ft. x 4ft.) USING 12.5mm. (1/2 INCH) THICK MARINE PLYWOOD OR TARPAULIN OF THE SAME SIZE POSTED ON 5mm. (3/16 INCHES) MARINE PLYWOOD.
2. ALL EXISTING BILLBOARDS OF ON-GOING PROJECTS SHALL BE REPLACED WITH NEW ONE ADOPTING THE ABOVE GUIDELINES.
3. FOR EACH BUILDING PROJECT, THE BILLBOARD SHALL BE INSTALLED IN FRONT OF THE PROJECT.
4. FOR EACH ROAD/ BRIDGE/ FLOOD CONTROL PROJECT, TWO BILLBOARD SHALL BE INSTALLED, ONE AT THE BEGINNING AND ONE AT THE END OF PROJECT.
5. NAME(S) AND/ OR PICTURE(S) OF ANY PERSONAGE SHOULD NOT APPEAR IN THE BILLBOARD.
6. NO OTHER BILLBOARDS SHALL BE ALLOWED TO BE INSTALLED 100 METERS BEFORE AND 100 METERS AFTER ALL DPWH PROJECT AND IN-BETWEEN THE PROJECT LIMITS OR WITHIN THE ROAD RIGHT-OF-WAY.
7. DPWH CONTRACTORS SHALL NOT BE ALLOWED TO PLACE NAMES OF POLITICIANS OR CARRY POLITICAL BILLBOARD ON THEIR EQUIPMENT.

-DO #21, S.2017

NOTE :

* INSTALLATION OF BILLBOARD SHALL BE ONE(1) AT THE BEGINNING & ONE(1) AT THE END OF THE PROJECT.
* NAMES OR PICTURES OF ANY PERSONAGES SHOULD NOT APPEAR IN THE BILLBOARD.
* NO POLITICAL BILLBOARD SHALL BE ALLOWED TO BE INSTALLED 100m BEFORE & 100m AFTER ALL DPWH PROJECTS & IN BETWEEN THE PROJECT LIMITS OR WITHIN THE ROAD-RIGHT-OF-WAY.
* DPWH CONTRACTORS SHALL NOT BE ALLOWED TO PLACE NAMES OF POLITICIANS ON THEIR EQUIPMENT OR CARRY POLITICAL BILLBOARD ON THEIR EQUIPMENT.
