Justification:

Change in station limits to prioritize most susceptible section to collapse.

 Decrease in physical target due to increase per unit cost based estimated computations from survey and result of design of structure. The design used for slope protection is with Active Protection System (Item 522A(1) and Permanent Ground Anchor (Item 513(1))

Based on our evaluation, the submitted request for modification of the said project is in order; hence, approval hereof is recommended. And put to Masshablence for the Cort

CERTIFICATE OF REASONABLENESS OF COST ESTIMATE

Project: OO1: Ensure Safe and Reliable National Road System ~ Asset Preservation ~ Rehabiliation/Reconstruction of National Roads with Slips, Slope Collapse, and Landslide ~ Secondary Roads - Pili-Tigaon-Albay Bdry Rd - K0497+580.00 - K0497+680.44

Physical Target (as per GAA): 20,441 sq. m. Physical Target (as per POW): 5,068 sq. m.

DESCRI	PTION OF WORKS TO BE DONE	AS SUBMITTED			
	TION OF WORKS TO BE DONE	% TOTAL	TOTAL DIRECT COST 77,300.00		
Part A	Facilities for the Engineer	0.08%			
В	Other General Requirements	0.50%	483,447.30		
С	Earthworks	2.22%	2,159,921.43		
G	Drainage and Slope Protection Structures	97.21%	94,699,578.06		
	TOTAL:	100.00%	97,420,246.79		

Cost per kilometer of project (as per POW) = $\frac{Php 97,420,246.79}{5,068 \text{ sq.m.}} = 19,222.62 \frac{Php}{\text{sq.m.}}$

The high unit cost per sq. m. of the project as per Program of Work is attributed to the following:

- 1. The slope protection used in the project is a structural type of slope protection that utilizes high tensile wires and anchor bolts which costs much higher than the standard slope protection works.
- 2. The height of the slope is also very high which entails more quantities to be covered in a shorter length.
