Justification: <div>Use of Rock net per PHW</div> <ul style="list-style-type: none">The revised station limit reflects the exact section which needs immediate slope mitigation due to its susceptibility to soil/ rock collapse.The decrease from 13,888.890 square meters to 9,473.000 square meters in the physical target is due to the increase in length of the structure and the decrease in average slant height from 82 meters to 48 meters based on the result of the stability analysis.					

- The increase in unit cost is due to the design length of 5 meters permanent ground anchors, as recommended in the design analysis. Also, the utilization of the prevailing construction material cost of system components of the Active Protection System contributed to the increase in unit cost thereon causing a deduction in the target area of the proposed slope mitigation.
- The derived unit cost is based on the approved Detailed Unit Price Analysis and Program of Work which consider the lowest canvass cost for high tensile wire mesh, with joint rod, wire rope, rope grips, coupling coil, pin anchors, and cross clips/ anchors.
- See attached Certificate of Reasonableness of Estimates approved by the Regional Director.
- See also the attached evaluation of the Bureau of Construction on the unit cost of the similar type projects.

Based on our evaluation, the submitted request for modification of the said project is in order. Hence, the said request is hereby recommended for Secretary's consideration and approval.
